

BECOME PASSWORD ROYALTY

WHEN IT COMES TO PASSWORDS, LENGTH IS MORE SECURE THAN COMPLEXITY.

A password with just 7 letters or numbers can be cracked within **.29 milliseconds**.

BUT

A password with 12 letters and numbers combined would take **2 centuries**.

When considering password security, make sure you:

- Generate a secure password.
- Adhere to your organisation's password policy.
- Use different passwords for different accounts.
- Avoid using passwords consisting of names.
- Avoid including any details that may be public, for example, birthdays, anniversaries, a pet's name, etc.
- Apply multi-factor authentication wherever possible.

Your passwords are the keys to your online life. Protect them as you would if they were the keys to your home. Never give them away and keep them as secure as possible.
